Entity Attributes, and Primary Keys

Bachelor of Information Systems

INTRODUCTION TO
DATABASE AND INFORMATION SYSTEM

Learning Objective(s)

.....

This material should address the following question(s).

- ? What are entity attributes?
- ? How to uniquely identify objects?

An entity and its attributes

An entity is **described** through its attributes or members.
An entity may have one or more attributes.

Case Study

Inside the campus library.

Case Study

Inside the campus library.

- A library has a multitude copies of books, articles, etc.
 - New collections come periodically.
- Anyone may come and enjoy the collections.
 - Only library members can lend books for period of time.

**What attributes
are needed
to describe
a book**

Case Study

Inside the campus library.

- Its title;
- One or more authors;
- Its publisher;
- The published year.
- Its edition;
- Its ISBN;
- etc.

**What attributes
are needed
to describe
a book**

Case Study

Inside the campus library.

- Its title;
- One or more authors;
- Its publisher;
- The published year.
- Its edition;
- Its ISBN;
- etc.

How to uniquely identify objects?

How can we **differ** a book from the others?

What attribute(s) can make a book **unique** from the rest?

Case Study

Inside the campus library.

- Its title;
- One or more authors;
- Its publisher;
- The published year.
- Its edition;
- Its ISBN;
- etc.

Case Study

Inside the campus library.

- Its title;
- One or more authors;
- Its publisher;
- The published year.
- Its edition;
- Its ISBN;
- etc.

A natural key attribute,
acting as **primary key**.

Primary key

It is **one** or a **combination of attributes** (composite) used to uniquely identify an object from the rest.

★ What if there is no key attribute?

When there is no natural key available, we may introduce a **pseudo/synthetic/surrogate key** as its primary key.

Case Study

Transaction at the cashier.

Case Study

Transaction at the cashier.

- The date?
- The items in the cart?
- The money?
- The cashier her/himself?
- The customer name?

**How to describe
a transaction**

Case Study

Transaction at the cashier.

- The date?
- The items in the cart?
- The money?
- The cashier her/himself?
- The customer name?

**In the case like this,
we may introduce
a surrogate key,
transaction ID.**

Conclusion

.....

- ✓ One or more attributes describe an entity.
- ✓ A key is used to uniquely identify objects.
- ✓ A key may consists of one or more collaborating attributes.
- ✓ A surrogate key can be introduce when natural key is not available.
